

Pick 6 Pics

by Guillem Ferrer

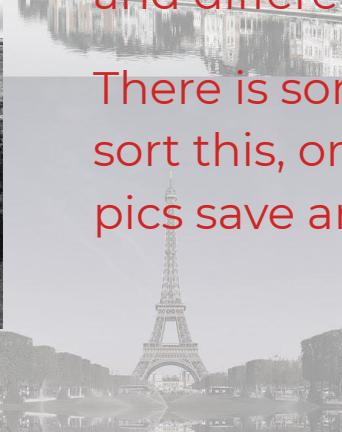

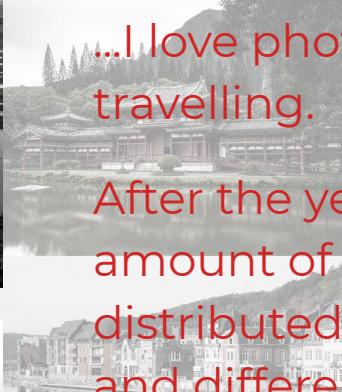

About me...

...I love photography, nature and travelling.

After the years, we all have a huge amount of messy pictures, distributed in old and new hard discs and different computers.

There is something we must do to sort this, or at least to keep the best pics save and sound!

What is my app about?

As the app name says, you have to pick 6 pics, one from each continent. Here we are linked to the *unsplash* photo gallery, a huge and free photo database.

First you will be requested to SignUp or LogIn. Then you are able to click on a continent button and you will be redirected to a preloaded search. There you can pick your favorite pic of each continent and see all them together in your profile.

[Africa](#)

[America](#)

[Antartica](#)

[Asia](#)

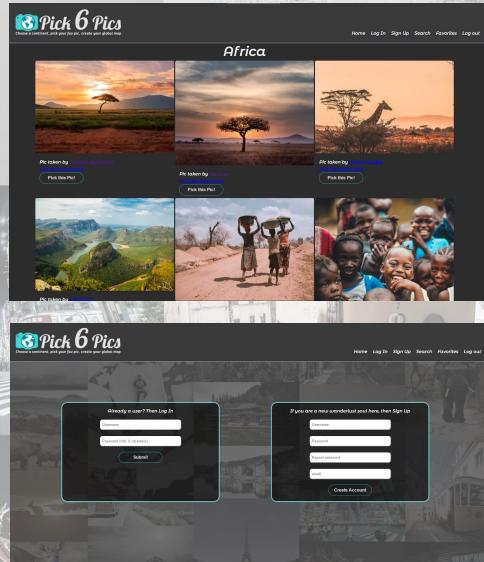

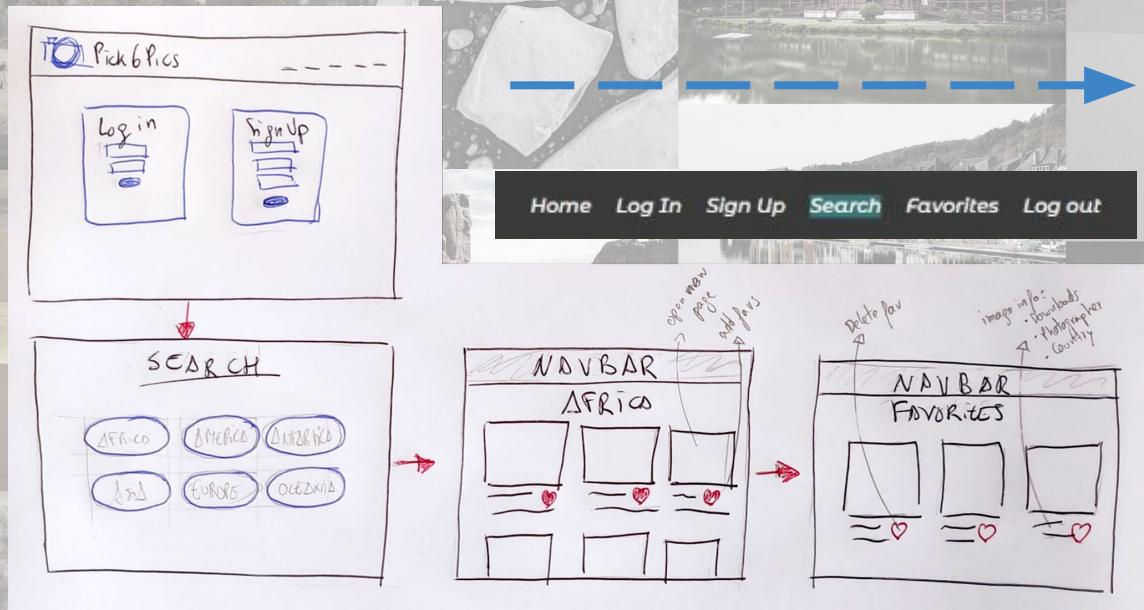

[Europe](#)

[Oceania](#)

How did I started?

Making storyboards helped me a lot in order to have a clear focus in the very first steps of the project.

The biggest challenge?

Connecting to such a huge API has been challenging but worth it, as the data you can get from there is great.

Also making all the user's personal profile and database has been quite tough.

pics?**

(click the camera)

What is in the oven for V2?

- To make it 100% responsive in all devices.

- To limit the picked pics to 1 for each continent.

Thanks for watching!

(& for your time!)
*feel free to share it
